

## CLAIM AMENDMENTS

### IN THE CLAIMS

This listing of the claims will replace all prior versions, and listing, of claims in the application or previous response to office action:

1-21. (Previously Cancelled)

22-25. **Cancelled.**

26. (Previously Presented) A method for identifying a telecommunications subscriber, the method comprising:

signaling a call from a second telecommunications device of a second telecommunications subscriber to a first telecommunications device of a first telecommunications subscriber;

sending device information from the first telecommunications device to the second telecommunications device which indicates a type of subscriber data that the first telecommunication device is set up to receive; and

transmitting subscriber data from the second telecommunications device to the first telecommunications device in accordance with the device information;

wherein at least one of the first and second telecommunications devices stores transmission information which indicates which subscriber data has been transmitted from the other respective telecommunications device;

wherein the transmission information is assigned historical data which references the transmitted subscriber data;

and wherein the historical data of the transmission information stored in the respective telecommunications device is incorporated into the device information to be transmitted.

27. **Cancelled.**

28. (Previously Presented) A method for identifying a telecommunications subscriber, the method comprising:

signaling a call from a second telecommunications device of a second telecommunications subscriber to a first telecommunications device of a first telecommunications subscriber;

sending device information from the first telecommunications device to the second telecommunications device which indicates a type of subscriber data that the first telecommunication device is set up to receive;

transmitting subscriber data from the second telecommunications device to the first telecommunications device in accordance with the device information, wherein the subscriber data to be transmitted is referenced to current historical data; and

comparing the current historical data from subscriber data to be transmitted with historical data from received device information of the respective other telecommunications device, wherein the step of transmitting includes transmitting only subscriber data whose current historical data does not agree with the historical data of the received device information from the respective other telecommunications device.

29-33. **Cancelled.**

34. (Previously Presented) A method for identifying a telecommunications subscriber, the method comprising:

- signaling a call from a second telecommunications device of a second telecommunications subscriber to a first telecommunications device of a first telecommunications subscriber;

- sending device information from the second telecommunications device to the first telecommunications device which indicates components of subscriber data that the first telecommunications device wants to receive; and

- transmitting subscriber data from the first telecommunications device to the second telecommunications device in accordance with the device information;

- wherein at least one of the first and second telecommunications devices stores transmission information which indicates which subscriber data has been transmitted from the respective other telecommunications device;

- wherein the transmission information is assigned historical data which references the transmitted subscriber data;

- and wherein the historical data of the transmission information stored in a respective telecommunications device is incorporated into the device information to be transmitted.

35. **Cancelled.**

36. (Previously Presented) A method for identifying a telecommunications subscriber, the method comprising:

signaling a call from a second telecommunications device of a second telecommunications subscriber to a first telecommunications device of a first telecommunications subscriber;

sending device information from the second telecommunications device to the first telecommunications device which indicates components of subscriber data that the first telecommunications device wants to receive;

transmitting subscriber data from the first telecommunications device to the second telecommunications device in accordance with the device information, wherein the subscriber data to be transmitted is referenced to current historical data; and

comparing the current historical data from subscriber data to be transmitted with historical data from received device information of the respective other telecommunications device, wherein the step of transmitting includes transmitting only subscriber data whose current historical data does not agree with the historical data of the received device information from the respective other telecommunications device.

37. **Cancelled.**
